back plate installed

Back plate

Arlington's new, non-metallic enclosure boxes are the perfect solution to protecting and securing power backups, security devices and other valuable equipment – in a debris-free environment.

Made of heavy-duty, UV rated non-metallic material, they're available in three convenient sizes:

- 7" x 8" x 3.5"
- 11" x 11" x 3.5"
- 12" x 12" x 4" with or without a back plate

The back plate allows an installer to mount components to the plate even after the enclosure box is mounted. Changing batteries, doing maintenance, etc. is easy just by removing the plate.

For added security Arlington's enclosure boxes are 'lockable' in a couple of ways. There's a knockout on the front of the box for an optional cam lock. And a latch that accommodates a padlock.

- Optional cam lock sold separately
- Handy 1/2" and 3/4" knockouts on top and bottom of box
- Meets NEMA Type 1 Requirements
