

EPR Kits for Conduit Repair

A two half shell bell by bell fitting for the repair of broken conduit. After the broken conduit is prepared, the EPR Kit is installed one piece at a time with the bell ends solvent cemented to the conduit. The interlocking joints allow for a solid bonding surface that restores the integrity of the conduit and provides a watertight seal. This product is not intended for pressure applications.

MATERIAL

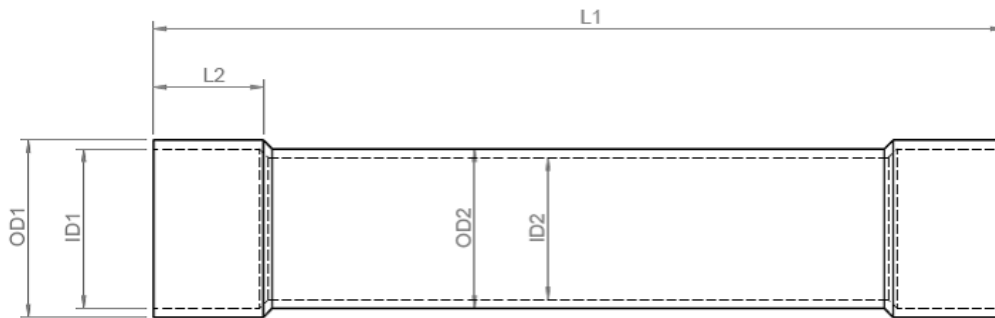

PVC

TEMPERATURE LIMITATION

Ambient maximum of 50°C/122°F

PACKAGING

Carton Quantity: 2
